

Product opportunity architecture

IDEATION-2026-09-06-AI-WORK-01 | Conditional kernel, not validated paid demand

Problem / cause	Mechanism	Raw ratings*	Disposition
P02 / RC01 ownership	M01 implement + owner	5 / 3 / 2 / 5 / 3 / 4	STRONG KEEP
P03 / RC02 acceptance	M02 baseline + acceptance	5 / 3 / 3 / 4 / 5 / 4	CORE KEEP
P01 / RC03 economics	M03 workflow selection	4 / 1 / 2 / 5 / 3 / 4	ENABLER
P04 / RC04 exceptions	M04 supervision + fallback	4 / 2 / 2 / 5 / 3 / 4	ENABLER
P05 / RC05 retest record	M05 manual version ledger	4 / 2 / 2 / 4 / 4 / 3	INFRASTRUCTURE
P05 / RC05 retest record	M06 scanner / twin	3 / 1 / 1 / 2 / 5 / 1	DEFER
P04 / RC04 exceptions	M07 agent routing / migration	4 / 2 / 2 / 3 / 4 / 2	DEFER
P02 / RC01 ownership	M08 course / capability graph	2 / 1 / 1 / 5 / 2 / 4	REJECT AS CORE

*1-5, higher favorable: problem fit / evidence / whitespace / feasibility / leverage / risk manageability.

KERNEL -> PC01: existing AI Value Sprint, with explicit acceptance evidence

Select -> baseline -> configure -> comparable runs -> accept/fix -> operator handoff
M01 + M02 + M04, enabled by M03 and manual M05. Scanner and autonomous migration excluded.

Evidence: EV03 local delivery/baseline gap; EV06 METR measurement limits; EV07 agent guidance; EV08/09 competition.
Sources and exact URLs: Step 5 evidence register. ASM01/02/04 (buyer pain, payment, approved data) remain unresolved.
Gate: CONDITIONAL PASS for an experiment specification. Root causes are locally plausible hypotheses, not proven general causes.
